Bats Micro E-Learning

Lindsey King

Project Information	
Project Title	Your Quick Response Guide to Bat Home Invasions
Project Purpose	This microlearning teaches Colorado homeowners and renters how to respond safely and calmly when a bat enters their home. It addresses common misconceptions, reduces unsafe reactions, and provides a simple five-step process aligned with wildlife safety recommendations. The training aims to reduce risk for both people and bats through clear, actionable guidance and a short scenario-based practice activity.

Roles & Responsibilities	
Instructional Designer	Lindsey King — Instructional Designer & Learning Experience Designer
Subject Matter Contributor	Colorado Parks & Wildlife guidance (referenced for accuracy)
Reviewer/Approver	Project stakeholder or homeowner safety representative (placeholder)

Audience, Goals & Objectives	
Target Audience	Colorado homeowners, renters, parents, and anyone who may encounter a bat indoors.
Project Goal	Learners will be able to respond safely, calmly, and humanely when a bat enters their home, using a clear five-step process and knowing when to contact wildlife officials.
Learning Objectives	After completing this training, learners will be able to… • Identify unsafe responses to indoor bat encounters • Apply a safe, humane five-step process to guide a bat outdoors • Determine when to contact wildlife officials for assistance

Project Deliverables	
Microlearning Module (Rise 360)	A 5–7 minute mobile-friendly module including interactive myth flashcards, graphics, and knowledge checks.
Storyline Scenario	A short set of branching scenarios with customized feedback.

Downloadable Reference Guide	A one-page quick-reference guide summarizing the five-step response, when to call for help, and contact options.

Project Milestones	
Week 1	Content research, outline, and learning objectives finalized.
Week 2	Rise 360 structure built; visuals and flip cards created.
Week 3	Storyline scenario developed and integrated.
Week 4	Quality review, mobile optimization, and final publishing.

Implementation & Measurement	
Implementation Plan	The microlearning will be delivered through a public link or LMS module. Communication may include homeowner association newsletters, community safety emails, or wildlife education outreach. The module is optimized for mobile access during real-world situations.
Evaluation Plan	**Level 1: Learner Reaction** Quick satisfaction survey sent out after e-learning is completed. **Level 2: Learner Knowledge** Knowledge check and scenario performance. **Level 3: Learner Behavior** Optional follow-up survey asking learners how they applied the steps during real encounters. **Level 4: Business Results** Potential reduction in unsafe homeowner responses and fewer wildlife-related incidents.
Constraints & Risks	Limited access to SME validation from wildlife officials. Real bat encounters are unpredictable, making behavior change harder to measure. Mobile delivery requires clear, concise content to avoid cognitive overload.
